

## Purpose

The intent of this approach is to align to the overarching EHS Policy and our core values, and to further articulate our commitment to safe and reliable operations.

## Scope

The Company's commitment to process safety applies to all persons involved in the Company's operations including, but not limited to, Company employees, officers, directors, contractors and consultants.

## OUR APPROACH

The inherent risks associated with the products and assets that we manage are complex and ever present. AltaGas, and its Midstream and Utilities businesses, apply a risk-based approach to process safety. Both our Midstream and Utility business units have process safety management systems that ensure asset integrity, regulatory compliance, and resiliency in respect of both human factors and engineering design and operation. Process safety and asset integrity are at the core to how AltaGas proactively manages risks and is aligned to our mission statement and values, and to accredited industry engineering organizations and authorities. Through this lens, we empower our Midstream and Utilities process safety and technical teams to safeguard our assets, including the maintenance and safe operation of our assets, through standards, processes and systems encompassed in our management systems. When we are developing new projects or project expansions, this begins with the engineering design and construction, and, with all of our assets, continues through the operation and maintenance so that our assets continue to operate in a way that meets or exceed regulatory requirements within each jurisdiction. We use techniques such as hazard identification, risk mitigation, incident investigation, audit, and corrective action processes to continuously improve our safeguard barriers to prevent loss of containment and integrity incidents and to improve the safety and reliability of our assets. Our Environment, Health & Safety Policy and Core Values set both our high expectations as to how personnel will comply with our corporate policies and standards, and the operations and maintenance standards and programs, which serve as operational controls in our management systems. AltaGas fosters a robust safety culture which creates an environment where employees are empowered to report hazards, incidents, and near-misses in accordance with operating division management system requirements.
