Purpose

The intent of this approach is to align to the overarching EHS Policy and to further articulate our commitment to operating in a more sustainable and responsible manner.

AltaGas understands that source reduction, waste minimization and recycling are important to the Company, the economy and the environment. This approach emphasizes our commitment to minimize and manage waste, including hazardous waste, in an efficient and responsible manner, and abide by applicable waste-related laws, regulations and permit requirements.

Scope

The Company's commitment to responsible waste management applies to all persons involved in the Company's operations including, but not limited to, Company employees, officers, directors, contractors, and consultants. Our commitment to responsible waste management also extends to our value chain, and we use our relationships with our contractors, suppliers, and other business partners to encourage and promote the principles of this approach.

OUR APPROACH

AltaGas strives to:

- Work with our stakeholders, including environmentally focused agencies, government, regulators, local communities including local Indigenous communities, experts, non-governmental organizations, and other businesses to support waste reduction, recycling, and other waste management actions and programs;
- Safely reuse and recycle materials in our construction and operations when feasible;
- In our office locations, maintain waste minimization programs, including composting and recycling programs;
- Measure and report on our waste minimization and management, and the waste-related risks and opportunities for our business;
- Implement innovative waste reduction and management solutions, and remain committed to continuous improvement of our waste reduction and management practices; and
- Ensure that all waste labeling, storage and disposal from our facilities meets or exceeds permit requirements and applicable federal, state and provincial regulations.
